

25 January 2006

To Whom It May Concern:

I have had the opportunity to work with B&G Roofing and Sheet Metal Inc. on City of Hamilton projects; the first being the Canadian Football Hall of Fame and the second, currently 80% complete, being the Mountain Regional Transit Centre.

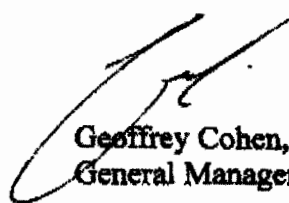

Both of these projects included roofing and mechanical repairs. B&G Roofing proved efficient and diligent in ensuring that all required trades were coordinated in a manner that allowed the projects to progress with little to no interference to the occupants of the buildings.

Both projects have been completed to date on schedule and within budget. We performed routine inspections on these projects and found the level of workmanship to be satisfactory, with good roofing procedures and practices being applied. B&G Roofing also ensured the quality of workmanship was met through their required mechanical sub-trades. Clear channels of communication have been maintained by the company with inspectors, owners, and mechanical sub-trades.

A satisfactory level of safety and awareness has been maintained on each job site as well. Measures have been used to ensure the safety of all workers as well as that of the public and occupants. Since both the Canadian Football Hall of Fame, a well known attraction located beside City Hall, and the M.R.T.C. were kept in operation during construction, this should be commended.

It has been a pleasure working with B&G Roofing and Sheet Metal Inc. and I feel confident in working with them on future projects.

Sincerely,

Geoffrey Cohen, B.A.  
General Manager
